

BELLAQUA
The Cooler Choice

2.5" x 12" In-line Clear Filter
4 Layers Media
Mineral Stone
Amethyst Stone
Bio Far Infrared
Alkaline Stone
1/4" NPT Female Thread

Studies have shown that alkaline water enables the human body to function more efficiently as it does not have to buffer as much the acids we take in through food and drinks. In-line alkaline filters are recommended for post-RO (Reverse Osmosis) use. The in-line alkaline ionized water filter requires a very slow flow rate of 0.25-.5 gpm in order for the water to have sufficient contact time with each of the media of the ionized water filter. Using this filter in combination with your current water filter system gives you pure & great tasting water with more health benefits than standard filtered water.
