PuROLine™ - 4000

FOUR STAGE PURIFICATION PROCESS

STAGE 1

5 Micron Particulate Filter: Removes dirt, sediment, sand and other physical particles.

STAGE 2

Activated Carbon: Reduces chemicals, such as chlorine, that may be in your water supply.

STAGE 3

Reverse Osmosis Membrane: Reduces 93%-98% of dissolved minerals, salts and other contaminants in your potable water supply.

STAGE 4

Post Carbon Filter: A polishing process that removes tastes and odors out of the water.

PUROLINE REVERSE OSMOSIS

Reverse Osmosis is the most effective and economical way to provide your family with high quality drinking water. Reverse Osmosis is the process by which water molecules are forced by your household water pressure through a semipermeable membrane. Contaminants are rinsed to the drain while your high quality filtered water is stored in the holding tank.
